

# Methods and tools for trusted AI: an urgent challenge for industry

Juliette Mattioli, Thales  
Rodolphe Gelin, Renault

# Trust relies on many aspects

AI challenges plenty of them

# AI is an unescapable technology

But it has fundamental weaknesses

Bias in learning data set

Lack of robustness

Unknow unknow

Data obsolescence

# Trustworthy & certification AI: from data/algo to AI SW & Systems Engineering

How to design, deploy, maintain, certify AI based critical systems ?

## Technological pillar

DATAS, AI ALGO, SW, SYSTEMS engineering to design,  
deploy and maintain AI based critical system

... industry strongly involved in programs,  
especially AI Manifesto members

... Cooperation with French basic research  
Initiatives, such as ANITI or DataIA, and  
academic research

**Norms pillar**  
Norm, standard and  
regulation environment  
toward certification

**Applications  
Evaluation Pillar**  
Ensure the right operational  
exploitation

Toward global strategy with coordinated programs and funding (Private, Public)
